

Vulnerability scores your team can **explain**, review and defend.

CVSSense Pro turns a finding into a traceable CVSS v4.0 assessment. Answer guided questions or set metrics directly; every decision, note and piece of evidence stays on record, inside your own network.

- Decision Assistant
- Offline text analysis
- Four-eyes review
- SSO & 2FA
- Encrypted backups

**CVSS 4.0**

Decision Assistant FOR EVERYONE

Plain-language questions per target type resolve every Base metric, one fact at a time. Progress and open metrics stay visible; AIka suggestions are applied only after you confirm them.

- Web & API
- Cloud / SaaS
- External network
- Internal network
- Mobile app
- OT / ICS
- LLM & AI systems

Manual Scoring FOR EXPERTS

All metric groups on one screen with the live vector and score. Import an existing vector, start from a preset, or adjust Environmental metrics (Modified Base) for your own context.

- Vector import
- Presets
- Modified Base
- Live score

One engine for both paths. Scores come from a single CVSS v4.0 implementation compiled from Rust to WebAssembly, so the Decision Assistant and Manual Scoring always agree.

AIka text analysis

- Reads the finding and **suggests metric values** with the words that triggered them.
- Runs **fully offline**; no text leaves the network.
- Confirm, undo or dismiss; admins set the policy.

Traceability & review

- Decision history** per metric: who changed what, when.
- Notes, open questions and **image evidence**.
- Four-eyes review**; completed results are locked.

Projects & reports

- Group assessments in **projects** with per-user rights.
- Severity and **OWASP Top 10** charts, personal dashboard.
- Export to **PDF, JSON and Markdown**.

Sign-in your IT accepts

- Single sign-on** via OpenID Connect: Entra ID, Google, Keycloak, Okta.
- Two-factor** (TOTP), enforceable for admins or all.
- Password + 2FA stays as emergency access.

Hardened by default

- Password policy after **BSI IT-Grundschutz**, lockout, session overview.
- Read-only container, **signed integrity check**.
- Obfuscated code, scoring in **WebAssembly**.

Your data stays yours

- Encrypted backups**, daily and on demand, restore in the app.
- Your own server, **no internet** required.
- No telemetry, no cloud, no vendor access.

Running in minutes

One Docker image, one data volume, a browser wizard for the few values your installation needs.

1

`docker compose up -d`, read the one-time setup code.

2

Wizard: license, address, HTTPS mode, first admin.

3

Sign in. Add users, SSO and backups in Settings.

Try CVSSense Pro on your own server.
